A fossil fuel is a fuel formed by natural processes, such as anaerobic decomposition of buried dead organisms, containing energy originating in ancient photosynthesis. The age of the organisms and their resulting fossil fuels is typically millions of years, and sometimes exceeds 650 million years. Fossil fuels contain high percentages of carbon and include petroleum, coal, and natural gas.

It is important to clarify that these explanations—as for those linking inequality and health ( )—are thought to produce a contextual effect above and beyond the aggregation of individual or household-level effects. That is, they seek to explain whether there is an impact on the environment associated with living in an unequal society in addition to any effects of there simply being more ...
