Fundamentally, a CANDU nuclear power plant generates electricity like most "thermal" electricity stations (i.e. those that use heat), which includes fossil-fuelled stations as well as most other commercial nuclear stations in the world: Heat is used to boil water, which turns to high pressure steam, which flows through a turbine, which turns an electrical generator, which makes electricity.

The nuclear power debate is a long-running controversy about the risks and benefits of using

nuclear reactors to generate electricity for civilian purposes. The debate about nuclear power peaked during the 1970s and 1980s, as more and more reactors were built and came online, and "reached an intensity unprecedented in the history of technology controversies" in some countries.

But this absolutely verboten topic fades into irrelevance in comparison with his most momentous discovery that has ...
