"I know that most men, including those at ease with problems of the greatest complexity, can seldom accept even the simplest and most obvious truth if it be such as would oblige them to admit the falsity of conclusions which they have delighted in explaining to colleagues, which they have proudly taught to others, and which they have woven, thread by thread, into the fabric of their lives."

Static electricity can be brilliantly useful: photocopiers and laser printers wouldn't work without it. But think about lightning for a moment and you'll see it can also be pretty scary. Although static isn't harmful by itself, when large amounts of it build up and suddenly discharge you can get dramatic and dangerous sparks (it takes about 3000 volts to make a spark just 1mm long).
