Environmental history is the study of human interaction with the natural world over time, emphasizing the active role nature plays in influencing human affairs and vice versa.. Environmental history emerged in the United States out of the environmental movement of the 1960s and 1970s, and much of its impetus still stems from present-day global environmental concerns.

Plastic contamination is an increasing environmental problem in marine systems where it has spread globally to even the most remote habitats. Plastic pieces in smaller size scales, microplastics

(particles <5 mm), have reached high densities (e.g., 100 000 items per m<sup>3</sup>) in waters and sediments, and are interacting with organisms and the environment in a variety of ways.
